

Rugs, Mats & Furniture Feet

Material compatibility guidelines for DeckRite and MariDeck PVC surfaces

WHY THIS MATTERS

DeckRite and MariDeck membranes are PVC-based products engineered for outdoor exposure. Materials placed directly on the surface must also be compatible with PVC. Rubber-based products - including EPDM and neoprene - can interact with the membrane and may cause discoloration, staining or long-term degradation.

AVOID: RUBBER BACKING

May cause staining, discoloration or degradation.

PREFERRED: COMPATIBLE CONTACT

Use unbacked rugs or confirmed PVC-compatible materials.

AVOID DIRECT CONTACT

- Rubber-backed rugs or mats
- Rubber feet, pads or bases on patio furniture
- Grill mats or protective pads with unknown or rubber backing
- Continuous contact with any unverified material

RECOMMENDED OPTIONS

- Unbacked rugs or mats
- Nylon or plastic feet and bases under furniture legs
- Products whose manufacturer confirms PVC/vinyl compatibility
- Supplier-approved protective mats for grill areas

THREE-STEP FIELD CHECK

- [1] Check the backing, feet and support materials.
- [2] Confirm the manufacturer identifies the product as compatible with PVC or vinyl surfaces.
- [3] When compatibility is uncertain, contact the supplier or DeckRite Technical Services before use.

GRILL MAT GUIDANCE

Do not assume a heat-resistant mat is compatible with PVC. Verify the backing material before placing it on DeckRite or MariDeck. Contact your local supplier or DeckRite Technical Services for guidance when needed.

IMPORTANT: Material compatibility should be confirmed before prolonged surface contact.

Examples of Rubber Contact on Vinyl

Visible staining, imprinting and surface distortion from incompatible material contact

WHAT THE PHOTOS SHOW

These photographs show a PVC membrane after prolonged contact with a rubber-backed outdoor mat. The rectangular outline, discoloration and repeated surface impressions correspond to the mat contact area.

CLOSE-UP VIEW

Localized ridging, imprinting and discoloration within the area where the rubber-backed mat contacted the vinyl.

OVERALL VIEW

The rectangular footprint and surface changes follow the size and placement of the mat on the PVC membrane.

PREVENTION

Do not place rubber-backed rugs, mats, pads or rubber furniture feet directly on DeckRite or MariDeck. Use unbacked materials or products whose manufacturer confirms compatibility with PVC/vinyl surfaces.

CHECK THE BACKING

The top surface may appear suitable while the backing contains rubber or another incompatible material.

IMPORTANT: Inspect and verify all contact materials before placing them on a PVC membrane.
